The invention concerns a can or container that is relatively affixed to a container such as a beverage can. The carrier of information may be a small diameter compact disk (CD), or a token, for example. The CD may contain music, video images, games or competitions, or the token may carry printed images, competitions and the like. A consumer may select the promotional system, such as a can of soft drink with a small CD fixed to it, allowing the drink within the canister to be enjoyed, along with the CD once it is removed from the can. The system may also include an adapter to hold the CD, and allow it to be placed into a standard CD player. A method of promotion of a product utilizing this promotional system is also disclosed.

REINVENTED ACTIVATION SYSTEM FOR A PRODUCT THAT USES PERSONAL IDENTIFICATION NUMBER ("PIN") ACTIVATION
A dark-inked activation strip, readable by a magnetic or optical scanner, or such as integrated circuit card ("ICC") technology. Prior to POS activation, and preferably obscured from view, the package has a personalized identification number ("PIN"), such as, alphanumeric characters with a scratch-off covering or peel-off label, or the PIN may be only readable by a magnetic or optical scanner, or may be encoded onto computer media, or may be data encoded within an ICC element. After activation, the product is registered with a registration database, whereby the PIN and perhaps other information is provided by the user over a communications channel, enabling the product to be utilized.
